**Subject:** Re: Vulnerability Advisory

**Date:** Mon, 03 Dec 2007 14:10:06 +0100

There is absolutely nothing misleading in publishing an advisory documenting "historic" issues; in fact, it would be misleading to conceal such facts.

All code audited by Secunia has been obtained in a legal manner.

You have absolutely no authority to dictate when, where, or how we publish details about our vulnerability research.

If you wish to continue our mutual corporation and coordination of disclosing vulnerabilities in your products, then I suggest that you find different ways and means of communicating rather than legal threats.

We shall continue to provide our services, conduct research in your products and other products as usual in the best interest of our mutual customers and the Internet in general.
